

Dinosaur Corner Bookmark

Audience: Primary age kids

You will need the following:

- A5 paper or a pre-folded origami corner bookmark (see internet for Instructions e.g. Red Ted Art Corner Bookmark)
- Coloured paper or light card
- Markers/pens
- Colouring in materials
- Embellishments e.g. googly eyes
- Scissors
- Glue stick

Session length:

Approx 30 minutes

Preparation

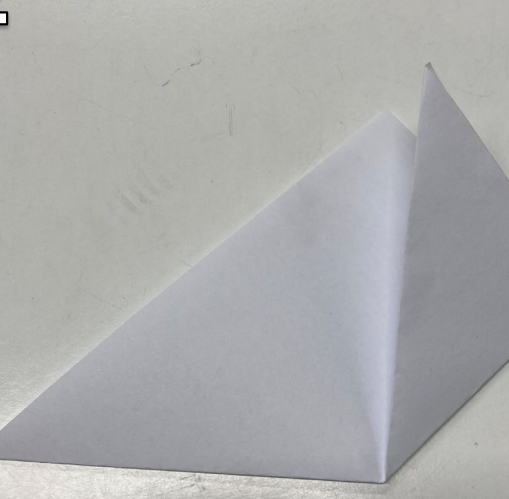

Make some examples

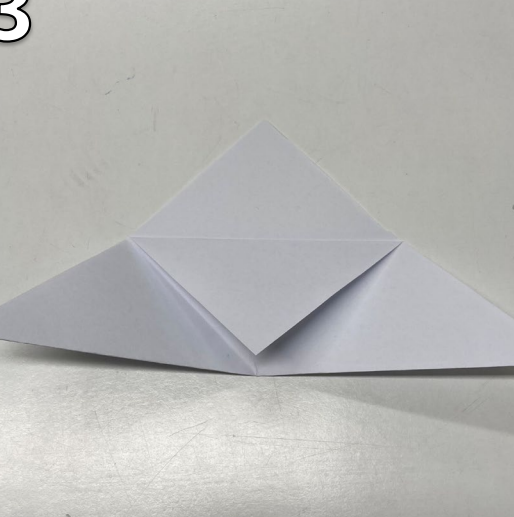

1

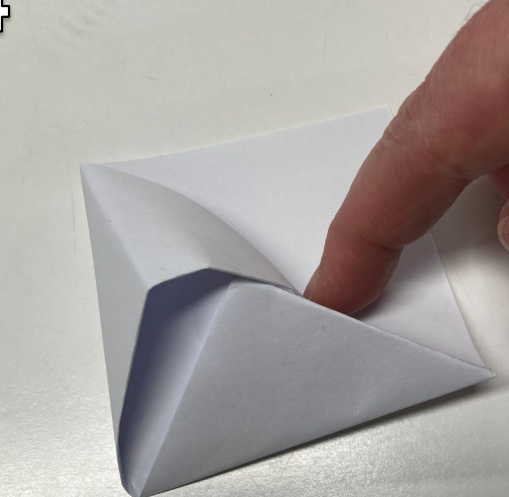

2

3

A white paper airplane with a yellow nose cone is shown from a top-down perspective. The airplane is centered on a light gray, slightly textured surface. The wings are spread out to the sides, and the tail is visible at the back. The yellow nose cone is at the front. The lighting is even, and the background is a plain, light gray surface.

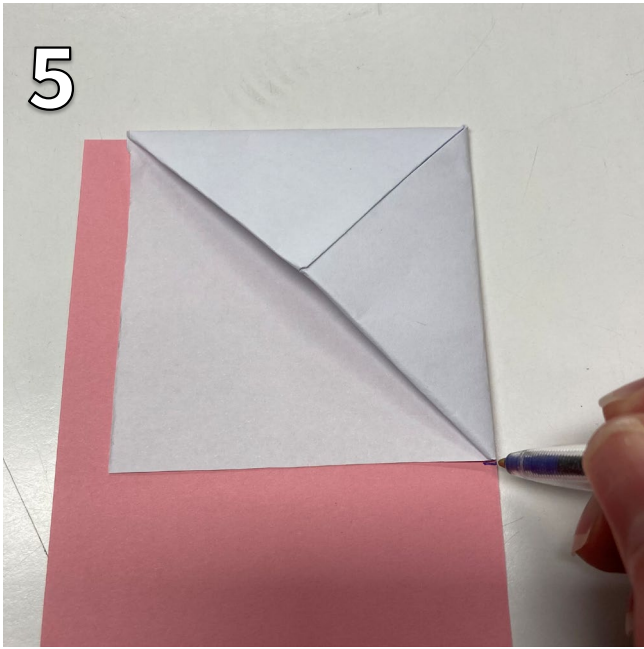

4

A close-up photograph showing a hand with a finger pressing down on the top of a white paper pyramid. The pyramid is sitting on a light-colored, slightly textured surface. The finger is positioned on the top edge of the pyramid, applying pressure to flatten the top. The pyramid's base is a square, and its four triangular faces are visible. The lighting is bright, casting soft shadows.

5

Place the bookmark at the corner of some coloured paper, or light card. Make sure the edges line up with the edges of the paper, and mark where the bookmark's diagonal line reaches the edges of the paper.

6

Connect the two marks with a curved line to make the body. You will also need a head with a long neck, two long legs, and any other markings or decorations you would like to stick on.

7

Cut out your dinosaur body parts, and use a glue stick to attach them. Glue your dinosaur body to the folded part of the bookmark, so you can still see the bookmark's back.

8

Use your ROAR-some dinosaur bookmark in all your favourite DINO-mite reads!
